

Intelicode 15.0.2.3 "Standard" update with existing SQL Server database

The following information assumes there are existing SQL Server databases for Intelicode data. SQL Server2008 or newer is required.

If current users connect to a 'Local' database with Intelicode 14 rather than or in addition to SQL Server database (Login Screen shows "Login [Local]"), see [15.0.2.3 Install Examples](#) for more information on first installing and configuring SQL Server if it needs to be added.

Intelicode recommends assuring company policy is adhered to concerning application updates and downloads.

Network/DB Admin coordination may be required to update SQL Server databases and for installing the Intelicode update on any computers.

Files to download for Intelicode 15.0.2.3 Standard update:

SQL Server script:

- ***Provided_v88.4 SQL Script for the "Provided" database:***
[Provided_v88.4.zip](#)
-

Application update for client OS:

Selecting the update setup file with the same install path as a previous setup is recommended in order to retain previous connection and activation settings.

- ***The following "Standard" setup files install to the currently logged on user profile and are designed to be run when the end user is logged into the OS.***
- ***Choose either the 32 bit or 64 bit setup to download and run***

 - ***Intelicode 15.0.2.3 Setup (32 bit setup):***
[Intelicode 15.0.2.3 Setup.exe](#)
 - ***Intelicode 15.0.2.3 x64 Setup (64 bit setup):***
[Intelicode 15.0.2.3 x64 Setup.exe](#)

Intelicode 15.0.2.3 "Standard" update with existing SQL Server database

Recommended update steps

- ***Download 15.0.2.3 required update files (listed above). Only one of the application Setup files will be used. Choose either the 32 bit setup or 64 bit setup.***
 - ***Have all users exit Intelicode.***
-

SQL Server – database update steps to complete first

- ***MAKE BACKUPS of the Intelicode SQL Server databases ("Office" and "Provided").***
 - ***Extract the downloaded script from 'Provided_vXX.X.zip' and execute it against the SQL Server "Provided" database. Note: The name in the [USE] command may need to be modified to indicate the correct name for your "Provided" database.***
 - ***Verify that Intelicode users have db_owner permissions to the "Office" database.***
-

Intelicode – application update steps

- ***Run the preferred 32 bit or 64 bit Setup.exe on one user computer. Accept prerequisites if prompted to download and install.***
 - ***Office14Converter steps below are only needed when updating from Intelicode version 14 or earlier to version 15.***
 - ***Open the Start menu > All apps > Intelicode > run "Office14 Converter" > select 'Convert SQL Ver 14 to SQL Ver 15' in top window > Import a Connection file or enter Server Address for SQL instance, Authentication, Port, Office Database Name and Provided Database Name > Start Conversion.***
 - ***Note: A previously created connection file can be imported to the 'Office14Converter' in order to populate connection settings. Connection files will have a '.tsicn' extension. See [V15 Converter Instructions](#) for a full description of options in this utility.***
 - ***Once the converter has completed, login to verify the SQL Server Intelicode data is correct. Proceed to install the same Setup.exe file for all Intelicode users.***
